

## INTRODUCTION

- Water is an important component of pharmaceutical manufacturing; our operations require an abundant supply of high-quality water as a raw material. Viatris acknowledges that water

## Prevent Impact on Water Quality

- We have systems in place to help ensure our operations do not disturb the water quality in the communities where we operate. We also strive to ensure that our wastewater does not adversely affect people or the environment by installing technologies that ensure adequate quality of treated wastewater. We also work with regulators and local governments to ensure we meet all local water and wastewater quality requirements.
- We shall maintain all applicable permits and authorizations for wastewater discharge issued by governing authorities and comply with all local discharge limits. Per our technical requirements, sites must minimize the amount of pharmaceutical ingredients released to the environment and must conduct manufacturing effluent risk assessments to confirm that management practices adequately reduce risk.
- We shall remain compliant with AMR Industry Alliance's Antibiotic Manufacturing Standard for our own operations and we are committed to implementing it across our external supply chain.
